Name: Samarth Pagaria
ROLL NO: 25102C2008

Activity

Task 1 :-

* Compare India with 4 other Nations

Country	Annual Generation volume.	Per Capita Generation	Documented Formal Recycling Rate	Regulatory & operational framework	Primary Challenge / Advantage.
India	~3.2 - 4.0 Mt/year	~3.1 - 3.3 Kg/person	~10 - 15% Formal	E-waste Rules	Challenge: Dominant informal sector using hazardous extraction methods.
China	~10 - 12+ Mt/year	~9 - 10 Kg/person	~20 - 25% Formal	WEEE Recycling Regulations & state-subsidized recycling funds.	Advantage:- Heavy state investment in massive automated industrial recycling hubs.
United States.	~7.0 - 7.2 Mt/year	~21 - 23 Kg/person	~15 - 20% formal	State - level legislation.	Challenge:- Exceptionally high per capita device replacement rates; reliance on exporting untreated e-waste
Germany	~1.6 Mt/year	~19 - 20 Kg/person	~45 - 50% formal	EU WEEE Directive & German Electrical and Electronic Equipment Act.	Advantages :- Highly structured mandatory retail takeback & municipal collection networks.
Japan.	~2.5 Mt/year	~20 Kg/person	~30 - 35% formal	Home appliance Recycling law & Small Appliance Recycling Act.	Advantage: High consumer compliance & manufacturer backed integration recycling pipeline.

FOR EDUCATIONAL USE

Task - 2

* 5 points to tackle this E-waste (Perspective to India).

1.) Formalize the informal Sector:- Integrate 1M+ informal workers (Kabadiwalas) into liscensed collections networks, equipping them with personal protection gear to safely dismantle waste rater than using open building or acid baths.

2) Use Eco - friendly Tech:- Adopt biometrically (microbe extration) and clay nano - traps (Kaoline) to safely recover metals and filter toxic features.

3) Enforce EPR Policies:- Strictly enforce national national e-waste rules and producer recycling targets to convert policy into actual collection.

4) Promote Urban mining.

5) Stop landfilling & Burning
